DETAILED ACTION

The following is a response to the amendment received on February 6, 2004 which has been entered.

Response to Amendment

Claims 1, 3, 5, 7, 9 and 11-17 are pending in the application. Claims 2, 4, 6, 8 and 10 have been cancelled and claims 12-17 have been added.

-The objection to the specification has been withdrawn due to the amendment reducing the length of the abstract to 150 words or under, deleting the implied phrase in the first line and correcting a typographical error in the disclosure as indicated in the office action mailed on October 4, 2003.

-The substitute drawing filed on February 6, 2004 has been approved. Therefore the objection to the drawings has been withdrawn.

-The 103(a) rejection of claims 1, 5, 7 and 9 has been withdrawn due to the amendment amending claims 1 and 7 over the prior art used in the rejection with the allowable subject matter indicated in the office action mailed on October 4, 2003.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

-In the amended abstract, line 6, "means" has been deleted (claim terminology).

-In the claim 3, line 2, "motors" has been changed to --motor--.

Allowable Subject Matter

Claims 1, 3, 5, 7, 9 and 11-17 are allowed. The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or render obvious a motivation to provide for:

-(As to claim 1) a continuously variable speed power transmission having an input member, an output member, a conjugate reaction control rotor with integrated motor/generator components mounted for selective rotation about an input axis, a conjugate motion converter with internal face gear teeth having pitch angles greater than 90 degrees and rotatably mounted for nutational and rotational motion about the input axis and a control means for selectively adjusting the rate of rotation of the reaction control rotor.

-(As to claim 3) a continuously variable speed power transmission with integrated motor/generator components having an input member, an output member, a reaction control rotor with the integrated motor/generator components mounted for selective rotation about an input axis, a pericyclic motion converter rotatably mounted for nutational motion about the input axis and a control means for selectively adjusting the rate of rotation of the reaction control rotor.

-(As to claim 7) a continuously variable speed power transmission having an input member, an output member, a conjugate reaction control rotor with integrated motor/generator components mounted for selective rotation about an input axis, a conjugate motion converter with internal bevel gear teeth having pitch angles greater

Art Unit: 3681

than 90 degrees and rotatably mounted for nutational and rotational motion about the input axis and a control means for selectively adjusting the rate of rotation of the reaction control rotor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
